

Corrected Curve Trial Lens Set

The **Corrective Curve Trial Lens Set** is designed and manufactured on a base curve allowing for thickness and space between stacked lenses. Each trial lens is mounted into an aluminum holder of uniform size; and the lens area is relative to the power of the lens. This stackable feature and the corrected curve fabrication is the main benefit of this type of trial lens set.

The Trial Lens Set contain a full range of Spherical Concave and Convex lenses; with plus and/or minus corrected curve cylindrical lenses; a variety of 12 prism lenses and 8 accessory lenses.

Available from a variety of manufacturers.
