

Full Diameter Trial Lens Set

The **Full Diameter Trial Lens Set** is designed and manufactured on a base curve to closely resemble an actual finished prescription lens. Each trial lens is mounted into an aluminum ring of uniform size; and the lens area fills the ring area. This limits the stackable feature. The reduced cost and near duplication of the finished lens are the main benefits of this type of trial lens set.

The Trial Lens Set contain a full range of Spherical Concave and Convex lenses; with plus and/or minus corrected curve cylindrical lenses; a variety of 12 prism lenses and 8 accessory lenses.

Available from a variety of manufacturers.
