

∴ **HEINE® LAMBDA 100 Retinometer**

It isn't always easy to explain the benefits of cataract surgery to your patients – the HEINE LAMBDA 100 will help you convince them.

NEW!

Proven by studies!*

HEINE® LAMBDA 100 Retinometer

The easy way of determining potential visual acuity after cataract surgery – proven by studies.*

- ✓ **Reliable diagnosis**
A pattern of lines is projected onto the retina and easily detected by the patient.
- ✓ **Simple operation**
Positioning by the patient using the spacer. If there are language difficulties, the pattern of lines can be aligned by means of gestures or displayed on the patient card.
- ✓ **Mobile use**
It is small and light enough to be used to examine bed-ridden patients.
- ✓ **Adjustable “gentle light”**
Avoids dazzle while penetrating opacities.
- ✓ **USB charging capability**
Highly flexible as it can be charged by a USB cord without a separate charger.

* SUMMARY OF STUDIES:

- ✓ Even in patients with opacities, relatively accurate prediction of potential visual acuity (especially in cases of moderate cataracts).³⁻⁵
- ✓ Retrospective analysis: in 94.5 % of cases the achieved postoperative visual acuity was equal to or higher than the one earlier determined with the retinometer.⁵
- ✓ Helpful in planning surgery, especially on patients also suffering from another condition that affects their sight, which is the case for just under a third of all cataract patients.^{1,5}
- ✓ Determines whether a combined operation is necessary or whether cataract surgery alone is sufficient.
- ✓ Useful in managing expectations, which is particularly important when dealing with patients with an ocular comorbidity where there is limited probability of improved visual acuity after surgery.⁵
- ✓ Rapid examination, taking less than 2 minutes, and easy to perform.²

The HEINE LAMBDA 100 Retinometer helps you explain the situation to your patients – improving the trust between doctor and patient.
